Program sparks fire of passion to probe space

TORY SHEPHERD
STATE EDITOR

“WE’RE going to Mars,” an Adelaide doctor says, as he outlines the hazards of human spaceflight.

Dr Gordon Cable, an aerospace medical expert, will tell a crop of students at an international space university program in Adelaide that fear of the risks should not put them off the challenge of going to space.

A five-week summer school at the University of South Australia will welcome students from around the world to learn more about the opportunities of space. Dr Cable told *The Advertiser* that humans have always been explorers and shouldn’t be put off now by the inherent risks of interplanetary exploration.

Going to Mars would mean dealing with different gravity fields, being trapped in a tin can with other explorers, and coping with the behavioural and mental challenges that brings, Dr Cable says. And in the end, space explorers will be working on an alien surface dealing with medical risks, Martian dust, the possibility of injury with no hope of evacuation – and that’s before thinking about encounters with alien life.

When Dr Cable talks to the students, he says, he wants them to recognise the fact that humans have always been explorers. “We’ve been jetting off on missions of a long duration at great risk for centuries,” he said, adding that the length of

space missions would be similar to old-time explorers setting off across the oceans in ships.

“There are going to be risks

to humans. People may die but that has always happened in human exploration of everything.

“We can wait and go once we know every single risk ... or we can just go. Do we go fully

prepared, or prepared enough? We go prepared enough.”

Premier Steven Marshall described the International Space University’s Southern Hemisphere Space Studies Program as a great opportunity

at a time when the industry is booming in SA, thanks to startups and the Federal Government announcement that the Australian Space Agency will be based here.

The program is a partnership with the International Space University in Strasbourg, France. Co-director Ady James said thanks to the agency there are opportunities for a “critical mass” of expertise in space in SA.
